

Vocational Training and Education for Clean Energy (VOCTEC) Educator-Level (L-2) Training
Programme on Off-grid Solar Photovoltaic Energy Systems

Date: 1 - 9 February, 2016, ANU, Guntur, AP

Participant's Feedback

I thank Gxermi for training us by taking effort.

I like to teach people living in ^{accomadations} ~~our quarters~~ because as they can't pay electricity bill and help to teach my friend about this who is in need to start a business and help her in establishing solar energy business.

I also try to help an family in installing solar energy system.

Thank You GxERMI, VOCTEC & USAID.

: M. Divya Bharathi

Do you have any suggestions for making the training more helpful and/or effective?

The classes was very interersted the presentation, practical session, and teaching style.

I suggest there be a chance to increase the practical session it will be useful to participants for getting practical knowledge because "practice makes man's perfect".

B. Tulasi Kameswari

I am working with a Solar institute which have some trainees in different division. I can train all of my lab's trainee. My institute National Institute of Solar energy. There are many training programs conducted and some are in queue. So that I can share my experience and knowledge which "I got with this training program" with all participants of our institute's training.
